DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 7 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Second limitation, page 3, "an amplifier for driving said output node from a first power terminal when the voltage on said input node deviates from the voltage on said output node, said amplifier driving said output node at a first output current level **to drive the output node to a voltage substantially equal** to the voltage on the input node" is not clearly describe in the specification. It appears the specification does not disclose the claim subject matters.

Third limitation, page 4, "the input terminal" and "the output terminal". There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 7 is rejected under 35 U.S.C. 102(b) as being anticipated by Walden (6,310,520).

Walden (Figs. 1-3) disclose an amplifier circuit comprising: an input node via input (Vref) and an output node via load (18) a main amplifier; a main amplifier (12) can be read as an amplifier which structurally similar to applicant amplifier (100), as such its operation is inherently seen; an auxiliary amplifier (16/20) can be read as an accelerator circuit for increasing the output current based on the differential voltage input to the auxiliary amplifier (16/20) and predetermined delta voltage already existed in the amplifier (16/20), (see col. 5, lines 5-15).

Allowable Subject Matter

Claims 1-6 are allowed.

Claims 1-6 call for, among others, an operation means (100) having inverted feedback and an acceleration means which receives input and output voltage as a differential input and outputs an current larger than the current output from the amplifier (100) when difference between input and output voltages exceed a predetermined offset voltage.
